Work Experience

Chengdu University of Traditional Chinese Medicine — Laboratory Assistant

Employment Period: April 2026 – June 2026

Main Responsibilities:

- Assisted in routine molecular and cellular biology experiments, including cell culture, PCR amplification, plasmid extraction, and sample preparation.
- Conducted daily management of laboratory instruments, reagent inventory and experimental supplies, maintained lab cleanliness and followed standard biosafety operating specifications to ensure smooth progress of all research projects.

Kindstar Global Medical Group — Associate Scientist

Employment Period: November 2024 – March 2026

Main Responsibilities:

- Establish, revise and standardize laboratory standard operating procedures for medical diagnostic experiments to guarantee stable experimental repeatability, complete data records and full compliance with quality management standards.
- Sort out and summarize academic papers and technical documents to assist the company's national academic exchange and science popularization work of diagnostic detection technology.
- Provide professional technical consultation for hospital clinicians and cooperative medical institutions regarding immunodetection principles, experimental operation performance and experimental data analysis, connecting laboratory basic research and clinical diagnosis practice.
- Compile standardized academic presentation materials for industry academic conferences to systematically learn cutting-edge clinical immunology research technologies and research trends.

Sichuan Hesheng Vision Technology company — Ophthalmic Clinical Data Analyst

Employment Period: June 2022 – September 2024

Main Responsibilities:

- Assist multi-center joint ophthalmology clinical research projects, track the recruitment progress of research subjects, inspect image shooting quality and standardization of experimental operation at all research centers.
- Complete quantitative statistical analysis of clinical eye examination data and eye imaging data, maintain research project databases, and assist in writing data summary documents and research project archives.

- Sort out experimental data results to form standardized research reports for project internal review and relevant regulatory filing work.

Education

Chengdu University of Traditional Chinese Medicine

Degree: Bachelor of Science in Optometry

Attendance Period: September 2018 – June 2022

- **Relevant Coursework:** Molecular and Cellular Biology, Biochemistry, Fundamentals of Biology, Histology and Embryology, Medical Immunology, Physiology, Pathology, Fundamentals of Ophthalmology, Ophthalmology of Traditional Chinese Medicine, Optometry, Binocular Vision.
- Built a strong interdisciplinary foundation in biomedical science with emphasis on ocular biology and human disease.
- Developed solid theoretical understanding of how cellular and molecular mechanisms underlie visual function and ocular disorders.

Interests and Skills

Academic Interests

- Molecular and cellular pathological mechanisms of hereditary retinal and ocular degenerative diseases
- Intracellular macromolecular transport and dynamic regulation of subcellular barriers such as nuclear pore complexes
- Application of super-resolution single-molecule fluorescence live-cell imaging technology in ophthalmic basic translational research

Professional Skills

- Academic Research: Master reading, sorting and summarizing biomedical and ophthalmology frontier literature; capable of clinical ophthalmic data quantitative analysis and database management; familiar with clinical laboratory quality control and standardized experimental operation specifications.
- Experimental Foundation: Solid theoretical knowledge of cell biology, molecular biology and ocular physiology, able to combine clinical ophthalmic phenomena with underlying cellular molecular mechanisms.
